

Affiliate AE

Purchase + Redeem Points Workflow

Example: A customer makes an INR 1,000 purchase. During the same checkout, the merchant may redeem selected existing points and also credit the new points earned from this purchase. **Closing balance = opening balance - redeemed points + earned points.**

1 ->	Customer purchases INR 1,000 purchase is completed at the merchant.
2 ->	Customer shows QR Customer opens the AE QR code and shows it to the merchant.
3 ->	Merchant scans QR Merchant scans the QR and the customer account is verified.
4 ->	Enter purchase amount Merchant enters INR 1,000 and selects the points/discount options.
5 ->	Debit existing points If the customer redeems points, the selected points are debited from the customer balance and the discount is calculated.
6 ->	Credit new points Points earned from this INR 1,000 purchase are credited to the customer balance.
7 ->	Save transaction The backend saves purchase, redemption and points ledger records in Supabase.
8	Update and notify New balance, discount and receipt are shown. Customer and merchant notifications are sent.

Backend accounting rule: Debit and credit are recorded as separate ledger entries under one checkout/transaction reference, so the balance and audit history remain correct.
